

Anti-Slip Boots

Qosina has added an anti-slip boot (#51599), used to prevent luer fittings from slipping apart, to its line of stock components. According to the company:

- The boot works with most standard luer fittings.
- Made from medical grade silicone and applicable for autoclave, gamma and EtO sterilizing, it measures 11/32-inch ID by 1/2-inch OD by 3/4 inch.
- This simple solution helps prevent loss and contamination due to accidental disconnection of luer parts.
- The company offers a range of luers and other stock components to complete your project.
