

Wireless Thermocouple Modules

Omega introduces the OM-WLS-TC eight-channel wireless thermocouple input module as a solution that supports thermocouple types J, K, T, E,N, R, S and B. The company says that the modules are characterized by:

- They can be operated as a standalone plug-and-play device when connected directly to the computer's USB port, or as a remote wireless device that communicates with the computer through the OM-WLS-IFC USB-to-wireless interface.
- They are CE compliant and ship with an array of software, including the new TracerDAQ®.
- They are ideal for chemical and water industries and for applications involving monitoring process temperatures in plant operations, R&D and manufacturing areas.
