

## Industrial Duty Rotary Encoder

Omega Engineering, Inc. introduces its new series of shaft encoders. The ZB series of shaft encoders includes general duty industrial rotary pulse generators with up to 1,000 PPR for high-resolution precision counting or speed measurement. The AU-ZBG models have a single channel for counting, unidirectional measuring or speed applications. The AU-ZBH models are for quadrature applications, allowing for counting up and down along with speed and direction measurements. A conversion bracket is available to easily convert this encoder into a length measuring sensor. Applications include industrial feeders and conveyor ovens.
