

## Abrasive Cloths

Contec introduces ABRATEC™ abrasive cloths that are made with various levels of abrasive grits backed with Contec's unique Quiltec® fabric. Quiltec fabric is significantly more durable and abrasion resistant than similar foambacked abrasives. This abrasion resistance and Contec sealed border technology allow the Quiltec side to remove sanding debris without contributing additional particles to the remediation process. ABRATEC abrasive cloths are designed to work with solvents, including the IPA/water blends typically found in sterile processing environments. ABRATEC cloths are also available irradiated with a dose of 25-50 kGy, which helps maintain the integrity of sterile environments.
