

Business Management Software

KeyedIn™ Manufacturing from KeyedIn Solutions is a comprehensive, web-based (cloud) business management software solution for custom manufacturers. It combines the power of an enterprise resource planning (ERP) solution with tools specifically designed to solve the business challenges of manufacturers. The software provides management tools for estimating, invoicing, purchasing and production management in a single platform. It utilizes automation, so that essential transactions are generated and customized with relevant data as soon as a set stage in the process is reached. It provides a visual view of the plant floor, allowing managers full visibility into the schedule and control of processes. It also integrates QuickBooks and other applications to provide a seamless view of financial information. Typical users include small- to mid-sized and niche manufacturers.
