

Industrial Vacuums

Nilfisk CFM introduces the Nilfisk CFM VHW321, VHW310 and VHW311 to its White Line – industrial vacuums. The Nilfisk CFM VHW321 portable unit is equipped with conical cartridge filters that provide more surface area, extended filter life and resistance to clogging. To reduce production downtime, users can clean the new filtration system with the vacuum in use. A Bag-In Bag-Out system is also available for safe replacement of the HEPA filter. Nilfisk CFM's VHW310 and VHW311 fixed industrial vacuums integrate with processing machines to collect fine powder and dust directly from the source. The compact VHW311 can be fixed or mobile, providing flexibility for processing environments with limited space. The units have GMP-compliant vacuum components for fast cleaning and quick decontamination, and HEPA filtration guarantees capture of up to 99.999% of all ultra-fine particles down to and including 0.12 microns in size to ensure that no toxic dust exhausts back into the air.
