

Intermediate Bulk Container

Snyder Industries has developed an intermediate bulk container (IBC) product to address the performance deficiencies associated with light duty caged IBC. The Excalibur IBC product line provides a more durable, corrosion resistant IBC value alternative to caged IBCs with a superior useful life to cost ratio.

- Unit has a 100% HDPE, rotationally molded tank with more than double the wall thickness
- Unit is UN/DOT certified
- Seamless, all plastic construction does not require a cage or a pallet
