

Software for Motion Control Systems

The GalilSuite Revision 1.0 Software Package from Galil Motion Control, Inc. is designed for configuring, analyzing and tuning company's motion control systems. It replaces the prior generation GalilTools and WSDK software. It provides an improved user interface, enhanced servo tuning capabilities with multiple tuning methods, real-time scopes, multiple device management and simplified communications. The package provides eight tools for working with controllers:

- Launcher: Manages controller connections
- Configuration: Defines various parameters and provides backup/restore capability
- Terminal: For entering and receiving controller commands
- Editor: Allows writing, saving and executing application programs
- Viewer: Provides a graphical display of controller and I/O status
- Scope: Captures and plots controller data such as motor position and velocity
- Tuner: For selecting controller PID parameters for optimal servo system response
- Watch: Displays controller and I/O status in a tabular format
