

Temperature & Humidity Data Logger

TandD Corp has introduced the NEW Wireless Data Logger RTR-507/507L. This is a new model in the RTR-500 Series, which enables wide range high precision measurements of temperature and humidity.

TandD has achieved a humidity measurement accuracy of $\pm 2.5\%$, as well as wide range measurements of temperature from -30 to 80°C and humidity from 0 to 99%RH.

By using the RTR-500 Series Base Unit, the recorded data in the RTR-507 not only can be collected via wireless communication, but can also be used for data monitoring, warning monitoring, and data management through networks to construct a data logging system to match the needs and environment of the user.

The logging capacity of the RTR-507 is 8,000 data sets consisting of both temperature and humidity.

A second model, the RTR-507L is available offering an extended life battery.
