

Thermal Guard Package for Loading Docks

The Serco® Thermal Guard Package, available on Serco Vertical Storing Dock Levelers, provides the ultimate energy and security seal for climate-controlled loading docks. This package allows truck doors to be opened from inside the building after the truck is positioned at the door without breaking a thermal seal at the dock. The package includes an enhanced hinged bottom draft pad, bumper covers and extended bumper gussets (to work with 10' wide door) to provide greater sealing capability, as well as an extra dock bumper mounted on the face of the dock to better protect the building.
