

## Turbine Meters

OMEGA Engineering has developed the FTB-630 series of turbine meters, which feature a non-resettable mechanical totalizer. They come in 2", 3", 4", 6" and 8" pipe sizes and a rugged construction of cast iron, with an epoxy coating for protection. The meters have an optional pulse output that can be equipped with magnetic pulse reed sensors that are, according to the company, well-suited for remote totalizing, pacing of electronic metering pumps and water treatment applications.
