

## Wireless Data Transmitter/Receiver

NK Technologies introduces the WRT Series wireless data transmitter/receiver. This wired-to-wireless solution provides a self-managed mesh network that works with any RS485 network protocol to promote highly reliable system operation in new or retrofit applications.

- Allows for wired and wireless equipment mixes to avoid radio signal obstacles
- Simple to configure for existing network packet parameters
- Provides LED indication of network status
- Completely transparent to present equipment
- Wireless data transmission of up to 100 meters between receivers
- Data transmissions up to 800 meter transmissions are possible with multiple hops
- Automatic route detection
- Self-forming and self-healing networking
- Supports 100 nodes per network maximum through 15 channels
