

Air Filter Housings

Camfil Farr's GlidePack® air filter housings ensure high indoor air quality and provide leak-free (less than 0.5% guaranteed) filter integrity. Available in two depths (13" and 25"), these housings include adapters to accommodate various types and depths of filters.

- Ribbed tracks allow filters to glide easily into the housing without binding
- Simplifying filter service
- Available in configurations from four high to six filters wide (8' x 12')
- Multiple-stage housings with adaptable tracks for prefilters and final filters (including gas absorbers)
- When upgrades are needed, housings are readily configurable in the field
