

Sumpcleaner/Dispenser

CECOR introduces the extra power combination coolant sumpcleaner/dispenser, Model CP50-200/200CB5, for coolant recycling programs in larger metal machining operations. Tank consists of two compartments; one 200-gallon for collecting and filtering dirty coolant and another 200-gallon for dispensing clean coolant.

- Sumpcleaner sucks up machine tool sump contents down to the bare metal in minutes
- Pump is powered by a Kohler 20 HP, 4 stroke cycle Command Series engine with electric start
- Sumpcleaner pumps fluid at rates to 110 gallons per minute and generates suction to 13" Hg (177" water)
- The dirty coolant passes through the filter which separates the chips and swarf from the coolant
- F23 Filter has capacity to hold 2.3 cubic feet of solids
- Sump can be refilled with fresh coolant from the dispenser side
- Both tanks have pump-in, pump-out capability
- Unit is mounted on an electric, 48 volt Columbia Par Car Truck for easy mobility
