

Ultrasonic Liquid Level Sensors

AutomationDirect's Flowline® EchoPod® and EchoSonic® II lines of ultrasonic liquid level sensors and transmitters are constructed with PVDF transducers and NEMA Type-6P polycarbonate enclosures.

- Sensors replace float, conductance and pressure sensors that fail due to contact with dirty, sticky and scaling media in small, medium and large capacity tanks
- Available with single- and multi-function capabilities, including continuous level measurement, switching and control
- Line is easily configurable via the WebCal PC software and the available USB fob adapter
- Accessories available including mounting brackets, reducer bushings, bulkhead fitting and flanges
