

Commercial Air Cooler Ranges

GEA has further developed its Küba market SP and Küba SG commercial air cooler ranges. New motors reduce energy consumption by 30% and at the same time increase efficiency to over 90%.

- Significantly increased air flow and simultaneously lowered pressure drop
- Terminal box is now an integral component of the fan, which considerably simplifies installation
- Components are simple and easy to clean and are part of the new GEA Hygienic Design concept
- From the heat exchanger, including case design, and up to aerodynamic optimized shape of the fans (including full bellmouth)
- Fan unit is hinged and heated and features new, controlled drain of condensation water
