

# Integrated Blister and Carton Module

Uhlmann Packaging Systems introduced the Blister Express Center 500 (BEC 500), a double-lane, integrated blister and carton module less than 10 meters in length. Designed to maximize efficiency and versatility, the BEC 500 is exceptionally easy to operate and allows fast format changeovers.

- Can process up to 500 blisters and 500 cartons per minute
- Ideal for packaging medium-sized batches of standard solid-dose products using conventional forming materials
- Operating costs are kept to a minimum via the BEC 500's double-lane setup
- Time-tested direct blister transfer ensures smooth end-to-end handling
- Integrated batch management system means that product-specific format data need only be entered once to be made available at all control units
- Inspection and marking systems are easily integrated into the line
