

## Metal Detection Technology

Anritsu's Dual Wave H provides the highest metal detection technology in the industry. Multiple frequencies are built in so users can run two frequencies simultaneously to maximize detection of ferrous and stainless metals independent of each other.

- Featuring the industry's first simultaneous, two-frequency magnetic field detecting method
- Auto-setting algorithm and tracking functions
- For frozen, wet or bulk products
- Phase-tracking function works on an individual product to maintain a stable detection operation
- Enhanced, maximum sensitivity to detect ferrous and non-ferrous metals assures effective and consistent contamination detection
- Improved product quality due to efficient detection
- Better line performance without fear of jam-ups or breakdowns due to metal contamination damaging conveyor lines or equipment
- Detection of smaller metal fragments compared to competing technology
- Easy cleaning and maintenance are assured by the system's worker-friendly design
