

## Automated Picking and Packing Robot

ABB Robotics introduces an 8 kg model to its FlexPicker line, expanding high speed picking & packing performance to heavier items. The stronger model supplements the existing 1 kg and 3 kg models, and features the smallest footprint of all Delta robots with payloads greater than 3 kg.

- Handles up to 100 cycles per minute
- State-of-the-art picking and packing technology, providing greater flexibility and versatility than hard automation
- Handles higher payloads with improved pick-and-place performance
- Redesigned carbon fiber arm-set
- New delta plate, designed to handle larger weights and inertias, and improved motion tuning
- Deeper (350 mm) work envelope than the other 1130 mm reach FlexPicker models
