

Palletizers and Software

ITW Warehouse Automation announces the latest improvements to its VTP Palletizers and VPS software. The VPS software has been upgraded to enable pallet patterns to be changed in real-time with minimal effort required of employees or the robotic palletizers.

- VTP Palletizers operate up to 40% faster with flexibility and gentle product handling
- Enhanced VPS software allows users to quickly and easily change pallet patterns without stopping production
- Pallet patterns are built with the graphic user interface in the PC and users simply input package sizes and number of cases on a pallet
- Software then displays the cases on the screen and users can arrange them as necessary and assign the pallet to start that pattern
- With no interruption, the selected pallet automatically starts the new pallet pattern
- VPS allows for an infinite number of flips or patterns
- VTP Palletizers are SCF/ISO friendly, category 3 & 4 compliant and incorporate an easy to use graphic interface
