

## Vertiguard Automated Barrier Panel

Frommelt Safety's Vertiguard Automated Barrier Panel now features several upgrades that make it ideal for industrial facility managers looking to increase safety and productivity in their plants.

- Unique bottom-up pneumatic panel that provides physical separation between machine operators and manufacturing processes
- Alternative to light curtains or area scanners, the panel is ideal for small interaction points with single or double robotic cells, part assembly, and conveyor openings
- Allows for overhead crane loading with a simple pneumatic operation to help increase productivity
- Improved finger guard using a 40 oz. FR vinyl sewn-in loop design to eliminate pinch point
- New brand cylinder and flange mount with center support and an improved sliding panel design for smoother operation
- Improved interlock switch brackets and additional switch options, including AB and Jakob Safety as well as a galvanized steel back panel and cylinder cover
- Availability of 3D modeling for easy insertion into project drawings
