

Bulk Transfer System

Palmer Manufacturing & Supply, Inc. has introduced a safer method of pumping, metering, and storage of potentially flammable chemicals with the new Palmer Bulk Transfer System (BTS). The Palmer BTS consists of:

- Storage tanks located in a fireproof room or logical location
- Pumping system for correct capacity and compatibility
- Small day tanks for each liquid located at the point of usage
- A properly designed PLC based control system to maintain levels, monitor flow rates, and to monitor the system

It also includes a color HMI to easily set up flow rates.
