

Insertion Flowmeter

McCrometer's FPI Mag flow meter is a hot tap full profile insertion flow meter. The unit is available for forward-flow only or bi-directional measurement in line sizes from 4 to 138 inches. The meter's flow sensor comes pre-calibrated from McCrometer's NIST traceable Calibration Lab and requires no recalibration in the field. The unit offers accuracy, performance and application flexibility. In addition, its design provides simple, low cost installation. The unit installs without service interruption and reduces installation time by eliminating the need to de-water lines or cut pipe, saving operators up to 45 percent of the total installed cost.
