

Magnetic Separators for Food, Chemical and Pharmaceutical Applications

Eriez announces the addition of an array of Ferrous Traps to the ProGrade® line of standard magnetic separators. ProGrade Ferrous Traps are offered in Ceramic, Rare Earth and Xtreme® Rare Earth magnet strengths, enabling professionals in diverse industries to select the appropriate level of protection for their application. The ceramic series, suitable for general industry assemblies, targets the removal of medium to large ferrous contamination and offer basic protection from tramp metals damaging downstream equipment. The rare earth series, designed to improve product purity in general industry and some food and chemical applications, targets small, fine and weakly magnetic ferrous contamination. The Xtreme series, with the most powerful magnet of the series, is designed for food and pharmaceutical-grade assemblies. Sanitary and standard models are available and are capable of withstanding pressures up to 150 psi (10.5 kg/sq cm).
