

# Two-Piece Coupling for Large-Diameter Piping Systems

Victaulic has extended its line of Advanced Groove System (AGS) couplings for faster and easier installation of large-diameter piping systems. Featuring flexible couplings for pipe up to 60 inches (1,525 millimeters) in diameter, AGS technology is ideal for water industry applications such as pipelines, including buried applications, and full mechanical plant piping. With a two-piece housing and a wedge-shaped groove that delivers pressure ratings up to 350 psi (2,400 kPa) depending on the pipe size and wall thickness, the couplings offer exceptional assembly speed and reliability. Style W07 and Style W77 AGS couplings are equipped with plated bolts and nuts and a Victaulic FlushSeal® gasket in Grade “E” EPDM, Grade “T” nitrile or Grade “L” silicone.
