

Wastewater Mixers

Chemineer® Model 20 HT with RL-3 Impeller

The Chemineer Model 20 HT/GT Mixers incorporate a modular design package that reduces the number of replacement parts that need to be carried in inventory by the operator. The wide range of speeds available provides improved process control and greater application versatility. The Model 20 HT/GT agitators are designed to meet AGMA, OSHA, ANSI, IEC, DIN, EU and ATEX standards and requirements. Other features include:

- High energy efficiency due to an optimized gear design and lighter weight extension shaft diameter
- Standard cast dry well seal eliminates lubrication oil leakage from gearbox
- Reversible rotation to meet a variety of process requirements
- Reliable performance and long life resulting from the cast gearbox with heavy duty output shaft and bearings
- Extensive output speed range allows optimization of process and mechanical design
