

Flexible Tubing Connectors for Single-Use Systems

Value Plastics introduces RQC Series tubing applications to the biopharmaceutical market for flexible tubing connections in single use systems. The connector set features an interface that includes a large button, an optional locking feature, as well as a single barb open flow design to

provide security and mitigate flow path obstruction. Available in polypropylene and polycarbonate materials, these connectors are compatible with industry standard quick connects and include caps and plugs to support sterilization and shipment needs. These new applications are offered in two tubing sizes to fit 1/4" (6.4mm) and 3/8" (9.5mm) ID flexible tubing and feature platinum-cured, silicone o-rings. All materials satisfy USP Class VI and ISO 10993 criteria and are suitable for autoclave and EtO or gamma sterilization.
