

## Pump Grinding System

Weiler's VersaGrind 11 Pump Grinding System offers a wide range of applications in the beef, pork and poultry industries. The positive displacement pump eliminates

roll back typically found in conventional screw-type grinders for enhanced product quality and works well with sticky raw materials typically found in the sausage industry and raw materials with high liquid content such as in the poultry industry. Speed control on three different drives help ensure exact particle definition, while also enabling versatility for different raw materials and end products. In addition, the separate pump and grinding head offer greater orientation flexibility on the processing floor.
