

Data Collection Meters

GrayWolf introduces remote, cloud-based access and control of any of its WiFi

enabled AdvancedSense, WolfPack or DirectSense meters for portable and semi-permanent monitoring of gases, particulates, pressure, humidity and temperature. Measurement data can be viewed on smartphones, iPads, Droids, PCs or any web-enabled device. Data may be displayed as multi-parameter graphs or in tabular format and attached notes can also be reviewed. Remotely adjust log intervals, modify attached notes, change alarm levels and more. In addition, logged readings can be downloaded via WiFi to any WIN XP, 7 or 8 device that has GrayWolf's WolfSense PC data transfer and reporting software loaded. Optional "Advanced Report Generator" software fully automates the entire reporting process, generating detailed reports that include data tables, graphs, photos, field text notes, government & industry guidelines, utilized instrument lists, calibration data and much more.
