

Airlock Slide Rail System

The Bush & Wilton Easi-Clean Tapered Rotary Airlock is now offered with a Slide Rail

System. With this design, the system will support the rotor and end cover upon removal, while incorporating the Easi-Clean system which allows for rotor removal without disconnection of the drive. In addition, this rotary airlock contains the Tapered Rotor feature which allows for rotor clearance adjustment in the field to compensate for temperature, wear or product variations. This rotary airlock is suitable for use in food or sanitary applications, where the valve's internals need to be cleaned on a regular basis, and in applications that require frequent product changeover.
