

Extra Heavy Duty Container

Messe Orbitron Dunne Company has unveiled the P-341 Ship Shape extra heavy-duty bulk container. Featuring a proprietary internal design combined with perimeter steel bracing, the container accommodates payloads up

to 2,000 lbs. to safely store and transport

large amounts of food and beverage ingredients, bulk chemicals and pharmaceuticals, metal waste chips, mineral and rock products and other granular, free-flowing dry products without the risks associated with cardboard and bulk bags. To promote complete discharge, it includes dual side projections that help container dumpers grip, rotate and empty the container. The container is rotationally molded in a single piece from 100% waterproof polyethylene for strength, chemical resistance and high performance in inclement weather. The shipping container offers a bulk capacity of more than 33 cubic feet on a standard footprint with a palletless design, stacks when covered and nests when empty. A variety of optional accessories such as casters, fork safety tubes, lockable covers and custom colors are available.
