

# Vented Chemical Storage Cabinets

The new Safestore Vented Chemical Storage Cabinets from Air Science are suitable for storage of noxious or odorous

chemicals. These cabinets minimize health and environmental risks in handling chemical vapors and residues, VOCs and general laboratory functions. The filtration system protects the safety of personnel during use, maintenance and decontamination. These cabinets isolate and trap biological and chemical vapors to prevent operator exposure, to prevent cross contamination and to eliminate ecological impact through chemical or particulate release into the environment. They are available in three capacities, 25 liters, 1,000 liters and 2,000 liters.
