

# High Speed Caseweighter

The METTLER TOLEDO HI-Speed CS3600 Caseweighter is an in-motion scale for weighing large packages such as boxes, cartons, cases, bags or sacks. Its design delivers accurate and repeatable weights, while a wide variety of accessories allow it to be tailored to specific application needs. The frame

and conveyor construction can withstand the impact of heavy packages, so the system is ideal for tough environments. Optional stainless steel construction is also available. Convenient access to all major components on the CS3600 provides for easy cleaning and maintenance and the belt design makes tracking, tensioning and changeout fast and simple. The caseweighter features rugged construction of powder-coated mild steel and can handle the stress of heavy packages. Optional stainless steel construction is available for applications that require it. The system can be supplied with a wide variety of rejecters depending on the application, including freestanding standard or heavy-duty push-off rejecters or drop-through conveyor and lift roller rejecter systems.
