

High Speed Flow Wrapper

WeighPack Systems introduces the high speed Sleek 65 Horizontal Flow Wrapper for confectionary, snack foods, bakery, hardware and other non-food products such as pharmaceutical or medical products. It can wrap using many roll stock

materials including and not limited to polypropylene film, microperf material, multilayer laminated, co-extruded and foil films. Designed for simple set-up and changeover, the wrapper is capable of 200 packages per minute. The machine is completely servo driven for precise positioning, and smooth acceleration and deceleration. With no chains, no gears and no lubrication needed, it is a low maintenance machine. A user-friendly color touch screen with pre-programmed product set-up and adjustable forming box make the flow wrapper flexible and easy to use.
