

# Spill Response Protection

Nikita Ernst, Associate Editor

New Pig has introduced the PIG® Rapid Response Drainblocker® Drain Cover specifically designed to provide facilities with affordable emergency spill response protection in spill-prone areas near drains. Packaged in an easy-open, hi-visibility storage tube so workers can find it quickly

and respond to the spill, the cover's urethane bottom layer creates a tight seal for quickly sealing both floor and storm drains during spill emergencies, indoors or outdoors. Affordable enough to place near all of a facility's spill-prone drains, the covers are perfect for fixed facilities, fleets, hazmat and other response teams who need to meet stringent EPA spill preparation and cleanup regulations. In addition, the drain cover features a UV-resistant polypropylene top layer that will not stretch or tear when picked up. They are offered in 4 sizes for square or round drains from 9" up to 36" with wall brackets and signage also available.
