

Bench Top Supercritical Fluid Extractor

Nikita Ernst, Associate Editor

The Supercritical Fluid Technologies bench top supercritical fluid extractor model SFT-110XW is the latest addition to the SFE product line. The completely redesigned

restrictor valve with integrated micrometer allows for very precise flow control, which is essential for demanding applications. A completely removable oven lid and large side panel allow the user easy access to the high pressure vessel(s). An indicator light on the SFT-10 pump module alerts the user to proper operation of the Peltier pre-cooler, ensuring CO₂ is maintained in the liquid state. A robust outlet from the restrictor ensures that users will not accidentally damage the outlet tube when inserting it into the collection container. Extraction vessels up to 500 ml, single or dual configurations, afford maximum versatility.
