

Custom Water Purification Systems

Nikita Ernst, Associate Editor

Introducing the PURELAB® Chorus range of laboratory water systems offering allowing customers to assemble a customized system, optimized to best fit their application, budget and the configuration of their laboratory – all without

compromising on water quality or the visual appeal of the unit. The systems are particularly well suited for use in laboratories with limited laboratory space and those that must retain precise control over dispensing methods and storage options. The range includes three water purification systems specifically designed to deliver the necessary water quality at the required through-flow – Chorus 1 for ultrapure Type I⁺/I, Chorus 2 for pure Type II, and Chorus 3 for general pure grade Type III water.
