

## Control Panel For Refrigeration & Gas Compression Facilities

Nikita Ernst, Associate Editor

With its GEA Omni™ control panel, GEA Refrigeration Technologies introduces a new, user-friendly, and highly versatile control system that features a high-definition, multi-touch screen. With its true high-definition (1366 x 768 pixels) color

display, the GEA Omni human-machine interface provides simple and well-organized visualization. In addition, GEA Omni incorporates single- and multiple-finger gestures. Since GEA Omni has been designed as an open system, it can monitor and control not only the relevant components of a refrigeration or gas-compression system made by GEA, but also those from other companies. In addition, quick on-screen access to documentation can prove highly valuable during system commissioning and troubleshooting.
