

Dust Collection Technology

Nikita Ernst, Associate Editor

A new miniature model commissioned by Camfil Air Pollution Control (APC) provides a compact way to transport, display and demonstrate features of the company's Farr Gold Series® dust and fume collector. Designed at one-tenth scale of a 16-cartridge dust collector, the model stands 18" (46 cm) high and will be used at trade shows and exhibitions, seminars and customer meetings. Camfil APC has commissioned several of the one-tenth scale models to deploy to company locations worldwide.
