

Continuous Flow Batch Feeder

Nikita Ernst, Associate Editor

MULTI-FILL is adding a Batch Feeder to its line of equipment designed to provide a

metered continuous flow of bulk products like cooked pastas and rice, cut vegetables, fruits, meats, and various salads to the hopper of its volumetric cup filler, allowing large quantities to be placed into the hopper with minimal monitoring.

Features of the Batch Feeder System include:

- Automatic flow, no adjustments required. When used with a MULTI-FILL volumetric filler, the Batch Feeder System speeds up and slows down with the filler as the whole line increases or decreases in speed.
- Easy-to-clean design with lift-out parts and swing-away safety covers. Major components remain attached in position during cleaning. No tools required for cleaning nor disassembly or reassembly. Easy access for maintenance.
- The Batch Feeder System can be mounted on the frame of the MULTI-FILL filling machine and swings away from the conveyor bed/hopper for cleaning. A stand-alone version is also available.
