

Continuous-Clean Housing Demo

MagVids

Industrial Magnetics Inc.'s continuous-clean housings are ideal for remote magnet installation locations, applications requiring frequent cleaning and fully automated processing systems. The cleaning process does not require the product flow to be stopped, and the cleaning cycle is completed in a matter of seconds. The air-actuated stripper seal assembly discharges collected tramp metal into a leak-proof enclosure with a discharge chute that ensures clean operation and isolation of possible hazardous materials.
